Urogenital System
Case Study 3

Emma is a 21-year-old student who has just finished her junior year in college. She has been sexually active since she was 18 years old. Recently, she has developed some lesions on her external genitalia, which causes her to make an immediate appointment with her doctor. Her doctor does not take long to make a diagnosis and tells her this infection could have easily been prevented.

1. Diagnosis –

2. Causative agent –

3. What is the treatment for this infection?

4. What are koilocytes?

5. How could this infectious disease have been prevented?

6. What might be the long term consequence of this infection?
