This Grants Collection is brought to you for free and open access by the Mathematics at GALILEO Open Learning Materials. It has been accepted for inclusion in Mathematics Grants Collections by an authorized administrator of GALILEO Open Learning Materials. For more information, please contact affordablelearninggeorgia@usg.edu.
Grants Collection

Affordable Learning Georgia Grants Collections are intended to provide faculty with the frameworks to quickly implement or revise the same materials as a Textbook Transformation Grants team, along with the aims and lessons learned from project teams during the implementation process.

Each collection contains the following materials:

- Linked Syllabus
  - The syllabus should provide the framework for both direct implementation of the grant team’s selected and created materials and the adaptation/ transformation of these materials.
- Initial Proposal
  - The initial proposal describes the grant project’s aims in detail.
- Final Report
  - The final report describes the outcomes of the project and any lessons learned.

Unless otherwise indicated, all Grants Collection materials are licensed under a Creative Commons Attribution 4.0 International License.

Manage Application: ALG Textbook Transformation Grants Round 8

**Award Cycle:** Round 8

**Internal Submission Deadline:** Sunday, December 11, 2016

**Application Title:** 277

**Application ID:** #001278

**Submitter First Name:** Scott

**Submitter Last Name:** Kersey

**Submitter Title:** Associate Professor of Mathematics

**Submitter Email Address:** skersey@georgiasouthern.edu

**Submitter Phone Number:** 912-478-1963

**Submitter Campus Role:** Proposal Investigator (Primary or additional)

**Applicant First Name:** Scott

**Applicant Last Name:** Kersey

**Co-Applicant Name(s):** Stephen Carden

**Applicant Email Address:** skersey@georgiasouthern.edu

**Applicant Phone Number:** 912-478-1963

**Primary Appointment Title:** Associate Professor of Mathematics

**Institution Name(s):** Georgia Southern University

**Submission Date:** Monday, December 12, 2016

Team Members (Name, Title, Department, Institutions if different, and email address for each):

Scott Kersey, Associate Professor or Mathematics, Department of Mathematical Sciences, skersey@georgiasouthern.edu

Stephen Carden, Assistant Professor of Statistics, Department of Mathematical Sciences, scarden@georgiasouthern.edu

Sponsor, (Name, Title, Department, Institution):

Sharon Taylor, Professor and Chair, Department of Mathematical Sciences, Georgia Southern University
Proposal Title: 277

Course Names, Course Numbers and Semesters Offered:

Calculus I, Math 1441, Fall, Spring and Summer semesters

Statistics I, STAT 2231, Fall, Spring and Summer semesters

Average Number of Students per Course Section:
40 (Calculus I), 30 (Statistics I)

Number of Course Sections Affected by Implementation in Academic Year:
50 (Calculus I), 50 (Statistics I)

Total Number of Students Affected by Implementation in Academic Year:
2000 (Calculus I), 1500 (Statistics I)

List the original course materials for students (including title, whether optional or required, & cost for each item):
Calculus I (MATH 1441) Thomas’ Calculus with MyMathLab access ($288.40) or MyMathLab Student Access Kit ($106.90). Required.
Introductory Statistics I (STAT 2231) Basic Practice of Statistics with Launchpad access ($169.35) or Launchpad access code ($91.75). Required.

Requested Amount of Funding:
$10,800

Original per Student Cost:
$106.90 -- $288.40 (Calculus I), $91.75-$169.35 (Statistics I)

Post-Proposal Projected Student Cost:
0

Projected Per Student Savings:
$106.90 -- $288.40 (Calculus I), $91.75-$169.35 (Statistics I)

Projected Total Annual Student Savings:
$351,425 -- $830,825

Creation and Hosting Platforms Used ("n/a" if none):

WeBWorK [3]: Open-source online homework management system with Open Problem Library. The library currently contains over 35,000 mathematics and statistics problems [4], and includes an editor for writing problems tailored to one’s course. The program is currently installed on a server maintained by a team member (S. Kersey), who has completed a WeBWorK system administrator training course hosted by the Mathematical Association (MAA). Both team members have experience using WeBWorK in the classroom setting.
Desire2Learn (D2L, Folio) [5]: Virtual Classroom at Georgia Southern University. This will be used for additional notes, handouts, modules and videos associated with the implementation of this project.

Departmental Storage (R: Drive): Hard drive space shared by all faculty within the Department of Mathematical Sciences at Georgia Southern University. This will be used, along with faculty web pages, to archive and share materials with other faculty at GSU upon completion of this project.

Proposal Category: No-Cost-to-Students Learning Materials

Final Semester of Instruction: Fall 2017

Project Goals:

Save students money on textbooks by replacing the current textbooks with the free OpenStax textbooks *Calculus Volume I* and *Introductory Statistics* [2].

Save students money on online homework systems by replacing MyMathLab (used in Calculus) and LaunchPad (used in Statistics) with the free WebWorK homework management system [3] with Open Problem Library (OPL) [4].

Support student success by developing additional course materials and online content adapted to our institutional course learning objectives, including notes, modules and videos that conform to the Quality Matters (QM) [6] standard for online courses. One of the team members (S. Kersey) of this project has completed a QM training course and is certified to develop online course content.

Redesign course syllabi, class schedules, course notes and other materials to coincide with the OpenStax textbooks and WebWorK. The flexibility of WebWorK’s Open Problem Library and custom question creation allows for the development of course content that meets the needs of our students.

Develop assessment methods to measure the impact of these changes on student success. In doing so, we will first assess the effectiveness of the learning materials using current (non-free) materials using a pre-test and post-test in each of the spring and summer sessions. In the fall we will repeat the tests with classes using the open-source (free) materials.

Sustain student impact by making all materials openly available to colleagues through university storage, Desire2Learn exported course modules, WebWorK exported problem sets, and faculty web pages.

Upon completion of this project, we will plan an expansion of open-source course content to other mathematics and statistics courses, such as Calculus II and Statistics II, in both the traditional and online formats.

Statement of Transformation:

Description: Replace the current (non-free) textbooks and homework systems with new open-source (free) alternatives for Calculus I and Introduction to Statistics I, and create
additional course content, such as notes, modules and videos, following Quality Matters guidelines [6].
The primary stakeholders are the students who will benefit from a reduced financial burden and more accessible open source content. Students will have access to all course materials (including textbook, homework problems, notes, etc.) on the first day of class, and no longer suffer delays in acquiring course materials because of Financial Aid and other factors.
The secondary stakeholders are faculty. With all resources on-line, there will be no delay in acquiring textbooks or homework access codes, so the instruction and assignment can begin on day one of the semester. Additionally, because it is open-source, instructors will have more control over course content, allowing adaption for different teaching styles.
The primary impact for students is reduced financial burden on students. With 90% of incoming students at Georgia Southern receiving some kind of financial aid in 2014-2015 [8], costs are clearly a major factor affecting student success. As well, by giving students a better learning experience in Calculus I and Statistics I, they will be better prepared to follow the course sequence to upper level classes.
The impact for faculty includes a shorter start-up time each semester and better prepared students entering the upper level classes. As well, with course material freely available and adaptable (including notes, worksheets and homework sets), our courses will be taught more uniformly, and faculty will spend less time in preparation.
The impact for our department and institution includes easier access and greater enrollment for students in the courses that use the free open-source material. As well, with course materials centrally located and shared among faculty, course instruction will be more consistent among different faculty. This is particularly important at Georgia Southern where we have relatively small class sizes rather than large lecture-run classes.
Upon success of our pilot run, the free open-source model can be adapted to other mathematics and statistics classes. This may apply to both face-to-face and online formats. This has the potential to greatly impact the enrollment of students at our institution, as well as their success in their degree programs.

Transformation Action Plan:

As a first step to our action plan, team members have already selected the textbooks (OpenStax’ Calculus I and Introductory Statistics) and homework system (WeBWorK) to be used in the transformation.
The next step is the creation of course syllabi, schedules, and materials. This will include course organization, expectations, and goals for new open-source transformation. Team members will administer standard testing instruments in the semester prior to implementing the new open-source materials. For statistics, the CAOS test [7] will be used, and an existing departmental assessment test will be used for Calculus.
S. Kersey will be creator of course material and instructor of record for Calculus I, and S. Carden will be creator of course material and instructor of record for Statistics I. Team members will collaborate on all other aspects of the transformation, including the creation of new WeBWorK problem sets.
The new materials will be set up prior to the first day of class. This includes pre-registering students in WeBWorK using class rosters and hosting of course materials in Desire2Learn. At the final stages of implementation, open-source materials will be stored in central locations and made available to faculty.

**Quantitative & Qualitative Measures:** Upon completion of this project at the end of the Fall 2017 semester, both quantitative and qualitative measures will be applied to assess the efficacy of the transformation to open-source materials. We will compare results from classes using non-free materials to those using the open-source materials outlined in this proposal. Quantitative measures: Comparison of pre- and post-content tests for each class, broken down by course learning objectives, including calculation of a confidence interval estimating the difference between the two samples. Comparison of scores on a common Final Exam. Comparison of DFW (Drop, Fail, Withdrawal) rates between classes. Qualitative measures: Comparison of surveys on student attitudes and opinions regarding course materials. Examination of course/instructor evaluations for comments and feedback regarding the course materials for each course.

**Timeline:**

<table>
<thead>
<tr>
<th>January 2017</th>
<th>Give content pre-test to students using current (non-free) course materials.</th>
</tr>
</thead>
<tbody>
<tr>
<td>January 30, 2017</td>
<td>Attend kick-off meeting.</td>
</tr>
<tr>
<td>February 2017</td>
<td>Match course objectives with OpenStax text sections and modify syllabi and course schedules accordingly.</td>
</tr>
<tr>
<td>March 2017</td>
<td>Complete creation and modification of existing electronic materials, including lecture note outlines to be consistent with OpenStax text notation and terminology.</td>
</tr>
<tr>
<td>May 2017</td>
<td>Give content post-test to students using current (non-free) course materials. Give survey to students concerning use of current (non-free) course materials.</td>
</tr>
</tbody>
</table>
Budget:

| Dr. Scott Kersey | Compensation for preparation time | $5,000 |
| Dr. Stephen Carden | Compensation for preparation time | $5,000 |
| Travel | Kick-off meeting and conference travel | $800 |

Sustainability Plan:

After completion of this project, no additional costs are required. Course information and materials will be posted at central locations for faculty to use, including university storage (R: drive), a Desire2Learn exported course, and on faculty web pages.

OpenStax textbooks are open source and free to the public. The WeBWorK homework management system and Open Problem Library is open source, and free to install on a local server.
The WeBWorK problems created or modified for our courses will be submitted to WeBWorK's Open Problem Library for use by other faculty and institutions, as well as having their source code available on faculty web pages.

Course materials, such as syllabi, weekly schedules, additional notes, modules, videos, and surveys will be made freely available to faculty through university storage, Desire2Learn course templates, and faculty web pages.

Team members will remain departmental point of contact for faculty interested in adoption of our open-source materials for future years.

## NARRATIVE

### 1.1 PROJECT GOALS

- Save students money on textbooks by replacing the current textbooks with the free OpenStax textbooks *Calculus Volume I* and *Introductory Statistics* [2].
- Save students money on online homework systems by replacing MyMathLab (used in Calculus) and LaunchPad (used in Statistics) with the free WebWork homework management system [3] with Open Problem Library (OPL) [4].
- Support student success by developing additional course materials and online content adapted to our institutional course learning objectives, including notes, modules and videos that conform to the Quality Matters (QM) [6] standard for
online courses. One of the team members (S. Kersey) of this project has completed a QM training course and is certified to develop online course content.

- Redesign course syllabi, class schedules, course notes and other materials to coincide with the OpenStax textbooks and WebWork. The flexibility of WebWork’s Open Problem Library and custom question creation allows for the development of course content that meets the needs of our students.
- Develop assessment methods to measure the impact of these changes on student success. In doing so, we will first assess the effectiveness of the learning materials using current (non-free) materials using a pre-test and post-test in each of the spring and summer sessions. In the fall we will repeat the tests with classes using the open-source (free) materials.
- Sustain student impact by making all materials openly available to colleagues through university storage, Desire2Learn exported course modules, WebWork exported problem sets, and faculty web pages.
- Upon completion of this project, we will plan an expansion of open-source course content to other mathematics and statistics courses, such as Calculus II and Statistics II, in both the traditional and online formats.

1.2 STATEMENT OF TRANSFORMATION

- Description: Replace the current (non-free) textbooks and homework systems with new open-source (free) alternatives for Calculus I and Introduction to Statistics I, and create additional course content, such as notes, modules and videos, following Quality Matters guidelines [6].
- The primary stakeholders are the students who will benefit from a reduced financial burden and more accessible open source content. Students will have access to all course materials (including textbook, homework problems, notes, etc.) on the first day of class, and no longer suffer delays in acquiring course materials because of Financial Aid and other factors.
- The secondary stakeholders are faculty. With all resources on-line, there will be no delay in acquiring textbooks or homework access codes, so the instruction and assignment can begin on day one of the semester. Additionally, because it is open-source, instructors will have more control over course content, allowing adaption for different teaching styles.
- The primary impact for students is reduced financial burden on students. With 90% of incoming students at Georgia Southern receiving some kind of financial aid in 2014-2015 [8], costs are clearly a major factor affecting student success. As well, by giving students a better learning experience in Calculus I and Statistics I, they will be better prepared to follow the course sequence to upper level classes.
- The impact for faculty includes a shorter start-up time each semester and better prepared students entering the upper level classes. As well, with course material freely available and adaptable (including notes, worksheets and homework sets), our courses will be taught more uniformly, and faculty will spend less time in preparation.
• The impact for our department and institution includes easier access and greater enrollment for students in the courses that use the free open-source material. As well, with course materials centrally located and shared among faculty, course instruction will be more consistent among different faculty. This is particularly important at Georgia Southern where we have relatively small class sizes rather than large lecture-run classes.

• Upon success of our pilot run, the free open-source model can be adapted to other mathematics and statistics classes. This may apply to both face-to-face and online formats. This has the potential to greatly impact the enrollment of students at our institution, as well as their success in their degree programs.

1.3 TRANSFORMATION ACTION PLAN

• As a first step to our action plan, team members have already selected the textbooks (OpenStax' Calculus I and Introductory Statistics) and homework system (WeBWorK) to be used in the transformation.

• The next step is the creation of course syllabi, schedules, and materials. This will include course organization, expectations, and goals for new open-source transformation.

• Team members will administer standard testing instruments in the semester prior to implementing the new open-source materials. For statistics, the CAOS test [7] will be used, and an existing departmental assessment test will be used for Calculus.

• S. Kersey will be creator of course material and instructor of record for Calculus I, and S. Carden will be creator of course material and instructor of record for Statistics I. Team members will collaborate on all other aspects of the transformation, including the creation of new WeBWorK problem sets.

• The new materials will be set up prior to the first day of class. This includes pre-registering students in WeBWorK using class rosters and hosting of course materials in Desire2Learn.

• At the final stages of implementation, open-source materials will be stored in central locations and made available to faculty.

1.4 QUANTITATIVE AND QUALITATIVE MEASURES

Upon completion of this project at the end of the Fall 2017 semester, both quantitative and qualitative measures will be applied to assess the efficacy of the transformation to open-source materials. We will compare results from classes using non-free materials to those using the open-source materials outlined in this proposal.

• Quantitative measures:
  ▪ Comparison of pre- and post- content tests for each class, broken down by course learning objectives, including calculation of a confidence interval estimating the difference between the two samples.
  ▪ Comparison of scores on a common Final Exam.
  ▪ Comparison of DFW (Drop, Fail, Withdrawal) rates between classes.

• Qualitative measures:
- Comparison of surveys on student attitudes and opinions regarding course materials.
- Examination of course/instructor evaluations for comments and feedback regarding the course materials for each course.

### 1.5 TIMELINE

<td>Complete creation of homework problem sets for WeBWorK, including modification of existing (either custom created or from Open Problem Library) problems to be consistent with OpenStax textbook notation and terminology.</td>
</tr>
<tr>
<td>July 2017</td>
<td>Upload electronic materials to Desire2Learn for use in Fall 2017 semester.</td>
</tr>
<tr>
<td>August 2017</td>
<td>Give content pre-test to students using new (free) course materials.</td>
</tr>
<tr>
<td>November 2017</td>
<td>Departmental presentation introducing open source materials (OpenStax, WeBWorK, lecture notes, etc.).</td>
</tr>
</tbody>
</table>
In the following weeks, additional individual meetings for faculty interested in adoption.

| December 2017 | Give content post-test to students using new (free) course materials. Give survey to students concerning use of new (free) course materials. Analyze data from both courses to evaluate efficacy of open-source materials. |

1.6 **BUDGET**

| Dr. Scott Kersey | Compensation for preparation time. | $5000 |
| Dr. Stephen Carden | Compensation for preparation time. | $5000 |
| Travel | Kick-off meeting and conference travel. | $800 |

1.7 **SUSTAINABILITY PLAN**

After completion of this project, no additional costs are required. Course information and materials will be posted at central locations for faculty to use, including university storage (R: drive), a Desire2Learn exported course, and on faculty web pages.

- OpenStax textbooks are open source and free to the public.
- TheWeBWorK homework management system and Open Problem Library is open source, and free to install on a local server.
- TheWeBWorK problems created or modified for our courses will be submitted to WeBWorK’s Open Problem Library for use by other faculty and institutions, as well as having their source code available on faculty web pages.
- Course materials, such as syllabi, weekly schedules, additional notes, modules, videos, and surveys will be made freely available to faculty through university storage, Desire2Learn course templates, and faculty web pages.
- Team members will remain departmental point of contact for faculty interested in adoption of our open-source materials for future years.

See attached letter of support from sponsoring Department Chair, Dr. Sharon Taylor.
December 6, 2016

To Whom It May Concern:

This letter is in support of the Affordable Learning Grant submitted by Dr. Scott Kersey and Dr. Stephen Carden. I find their proposal to have significant merit in terms of decreasing the financial burden of textbooks for students as well as contributing to the collection of online homework problems for a broad audience.

Drs. Kersey and Carden have been using the WeBWorK online homework system from the Mathematical Association of America (MAA) for several semesters. Each has found the problems already created to be quite useful. When they feel the need to add problems for their students, the process of adding to the database is also quite easy.

Their experiences with the WeBWorK system, as well as the costly and not as easy to use commercial online homework systems available with textbooks, prompted their desire to pursue the ALG opportunity. By capitalizing on their previous successes with WeBWorK, utilizing existing OpenStax materials, and adding to these resources, Drs. Kersey and Carden can lower the costs for many of our students.

Anticipating Drs. Kersey and Carden’s successful implementation of their efforts during Fall 2017, we expect to recruit additional faculty to participate in the program. In the past, faculty have expressed dissatisfaction with the limitations of the commercial products as well as the high cost of these materials. With the no-cost OpenStax and WeBWorK options, participation by other faculty in the department is a given. This project can be sustained at no cost to the department, USG, or the students. Long term financial relief for students can be easily attained through this project.

I support Drs. Kersey and Carden’s efforts to transform not only the way homework is handled in our department, but to use the OpenStax resources to transform teaching and learning in our department.

Please feel free to contact me if you need additional information.

Sincerely,

Sharon Taylor
Department Chair
Syllabus
Course Description: This is the first of a sequence of courses which present a unified treatment of the differential and integral calculus. Topics include: limits, continuity, differentiation and integration, applications of the derivative and the integral.

Prerequisites: Minimum grade of C in Math 1112 or Math 1113

Credit Hours: 4

Course Objectives: The successful student will be able to:

- Demonstrate their understanding of the definitions of limits and continuity
- Perform computations of limits and determine the continuity
- Evaluate derivatives using differentiation rules and the Chain Rule
- Apply derivatives to find extreme values and sketch graphs of functions
- Apply derivatives to solve problems of related rates
- Evaluate indefinite integrals and definite integrals using integration formulas and properties
- Evaluate indefinite integrals and definite integrals using the substitution method
- Understand the definition of definite integrals and apply definite integrals to solve area and volume problems

Coursework/Assessment:

- Homework (100 points)
- Quizzes (50 points)
- Three Term Exams (100 points each): In class on dates given above
- Final Exam (100 points): About half new material and half review
- Course average: \((\text{H}+\text{E1}+\text{E2}+\text{E3}+\text{F}+\text{R}) / 5.5\)
- Final Grade A (90-100%), B (80-89%), C (70-79%), D (60-69%), F (<60%)

Homework: On line homework using Webwork (sign in through Folio)

Recitation: Review, Solve some homework problems, Short quiz

Lectures: Students are responsible for class material and should get notes from any class they miss from a classmate.

Exams: No early or late exams given except under extreme circumstances with my approval and written documentation. Exam Policies will be given in class before exams.

Academic Dishonesty Policy: Any student who exhibits academic dishonesty in any form will receive penalty ranging from a zero grade or deductions on that assignment or test to a failing grade (F) for the entire course, and will be reported to the University Judicial Officer. For a full discussion of academic dishonesty, see the Student Guide at http://deanofstudents.georgiasouthern.edu/conduct/resources/faculty/academic-dishonesty/.

Civility Statement: See the Student Conduct Code at the URL above.

Additional Help: Free tutoring is offered in the Math Department (Room 3000) and at the Academic Success Center (912-478-5371, http://academics.georgiasouthern.edu/success/). Check for hours.

Copyright Statement: (1) I hold the copyright on my lectures and course materials, (2) my copyright encompasses student notes or summaries that exactly reproduce my lectures and course materials, (3) these materials are made available to students for their personal use only, and (4) students may not distribute or reproduce these materials for commercial purposes without my express written consent. Any student in violation of my copyright will be referred to the Dean of Students' Office as having violated the Code of Academic Integrity.

Final Report
Affordable Learning Georgia Textbook Transformation Grants

Final Report

Date: December 18, 2017
Grant Number: 277
Institution Name(s): Georgia Southern University

Team Members:

- Scott Kersey, Associate Professor, Dept. of Mathematical Sciences, skersey@georgiasouthern.edu
- Stephen Carden, Assistant Professor, Dept. of Mathematical Sciences, scarden@georgiasouthern.edu

Project Lead: Scott Kersey (Calculus) and Steve Carden (Statistics)

Course Name(s) and Course Numbers:

- Calculus I, Math 1441 (4 sections)
- Introduction to Statistics, STAT 2231 (4 sections)

Semester Project Began: Spring 2017
Semester(s) of Implementation: Fall 2017

Average Number of Students Per Course Section: 38
Number of Course Sections Affected by Implementation: 8
Total Number of Students Affected by Implementation: 304

1. Narrative

As stated in our proposal, the goal of this project was to develop and implement Calculus I and Introductory Statistics classes using free-to-student OER course materials, and to compare with classes run using traditional non-free course materials. The free course materials included the open source WeBWorK homework system and OpenStax textbooks, as well as course notes and additional homework assignments.
One hurdle to overcome was the installation of WeBWorK – although we have been using it for years on an external server, the university required that we comply to new security standards. To overcome this, we worked with the Provost and ITS to install WeBWorK on university computers. This installation will improve sustainability of our project.

The implementation included 2 classes each of Statistics and Calculus using our free OER materials, and 2 classes each using traditional materials for comparison. The OER classes used OpenStax textbooks and the WeBWorK open source homework system. In our classes we used some existing WeBWorK problems, and wrote some of our own. Supporting documents include some WeBWorK problems for the OpenStax Calculus I textbook, and WeBWorK problems for Statistics. The free course materials saved our students hundreds of dollars, each.

Our overall conclusion is that the effectiveness of our OER classes were as effective as classes using traditional materials, but probably no better. The benefit therefore comes in other ways: costs, ease of use, adaptability, ... For example, with OER materials students have what they need on day 1 (or earlier) of the semester compared with traditional materials that students wait to purchase until after the semester begins, thereby delaying their start in the courses.

The analysis of our implementation includes a survey (for calculus) and a statistical analysis (for statistics). The data shows in particular that the OER materials were effective, and that the students appreciated the “free” course materials, and would take a free OER course again in the future.

The reliance of the OpenStax texts in our courses was minimal. This is mainly due to having our own course materials (notes, handouts, homework). Moreover, both of use do not prefer the OpenStax textbooks, and will not use them in the future for these courses. We will continue to develop our OER courses and materials, using different textbooks.

The experience and impact for ourselves as instructors and students was mostly positive. We are both committed to OER and the potential to develop high-quality courses with free course materials, and our students
benefit from the cost-savings with no apparent loss in quality of the course.

2. Quotes

**Calculus I students who used OER materials**

- This was my 1st free course materials class and I was so thankful! This was a huge burden off my shoulders because I had to purchase more books.
- I very much appreciated that webwork was free. Although I do believe it is not as good an experience as MyMathlab, which gives you examples and more help with each problem. But webwork is not terrible. And thank you Dr. Kersey, I found your teaching style and attitude helpful!
- I really enjoyed webwork as it made easier to study and gave me lots of practice.

**Introductory Statistics Students**

- The homework being free, as well as allowing multiple attempts, taught me how to solve problems more confidently. The layout of the notes was extremely neat and made focusing on the main points a breeze!
- I really liked the organization and lecture outlines. It helped a lot when taking notes and looking back at what to study.
- ...great organization, loved the outlines because they helped me stay focused instead of writing note after note.

3. Quantitative and Qualitative Measures

3a. Overall Measurements

**Student Opinion of Materials**

Total number of students affected in this project: __228_____
Calculus in two sections who use OER materials
(based on questions III.7 through V.5 of Calculus survey)

- Positive: _66.4_ % of ___53___ number of respondents
- Neutral: __18.4__ % of ___53___ number of respondents
- Negative: __15.2__ % of ___53___ number of respondents

Statistics

- Positive: _96.7_ % of ___76___ number of respondents
- Neutral: __3.3__ % of ___76___ number of respondents
- Negative: __0__ % of ___76_ number of respondents
Student Learning Outcomes and Grades

Calculus

- ___ Positive: Higher performance outcomes measured over previous semester(s)
- _X_ Neutral: Same performance outcomes over previous semester(s)
- ___ Negative: Lower performance outcomes over previous semester(s)

Statistics

- ___ Positive: Higher performance outcomes measured over previous semester(s)
- _X_ Neutral: Same performance outcomes over previous semester(s)
- ___ Negative: Lower performance outcomes over previous semester(s)

Student Drop/Fail/Withdraw (DFW) Rates

Calculus

___33___% of students, out of a total _75__ students affected, dropped/failed/withdrew from the course in the final semester of implementation.

- ___ Positive: This is a lower percentage of students with D/F/W than previous semester(s)
- _X_ Neutral: This is the same percentage of students with D/F/W than previous semester(s)
- ___ Negative: This is a higher percentage of students with D/F/W than previous semester(s)
Statistics

18.4% of students, out of a total 76 students affected, dropped/failed/withdrew from the course in the final semester of implementation.

- Positive: This is a lower percentage of students with D/F/W than previous semester(s)
- Neutral: This is the same percentage of students with D/F/W than previous semester(s)
- Negative: This is a higher percentage of students with D/F/W than previous semester(s)

3b. Narrative

The main takeaway from a comparison of classes from before to after adoption of OER materials is that the main performance summaries are essentially unchanged, while student attitudes have improved due to the cost-savings and accessibility of OER materials.

We mention one more important qualitative observation. While both the calculus and statistics course used materials (lecture notes, homework sets, etc.) that were consistent with and followed the OpenStax texts, virtually all of the students seem to have interacted primarily with the lecture notes rather than the text. We speculate this may be part of a trend with the newer generation of students to view the textbook as the last, rather than the first, source of information for a course.

We should mention that the fall semester experienced 6 days of canceled classes due to Hurricane Irma, and some students did not return to class, which could influence the results.

Calculus

In Calculus, the student DWF rates were about the same (perhaps a little lower) for the OER group. Student attitudes, however, were different. The attached survey contains many questions concerning the course and methods of instruction. In particular, by a very high percentage, students who used the OER course materials prefer to use them again, and students who did not use the OER course materials would prefer an OER course. As well, the
results from pre-tests and post-tests were about the same for the OER and non-OER groups.

**Statistics**

For statistics, the DFW rate went from 15% of 68 students to 18% of 76 students. This difference is well with the range of standard random variation between samples; indeed, the p-value for a test of difference of proportions is .55, providing practically no evidence of a difference.

Similarly, a comparison of questions from the final exam were practically identical. The statistics faculty have a set of eight questions used on final exams to assess student outcomes. The results of two sections of statistics each from spring and fall were compared. The results are summarized in the table in the attached file.

As can be seen from the last row on the attached table, the overall results are slightly higher using OER materials, but are still within the range of ordinary random variation from sample to sample.

Student opinions in the statistics sections were collected via a survey giving the prompt “The organization and clarity of the course material was...”, with answer options on a Likert scale: very poor, poor, satisfactory, good, and very good”. For the purposes of the results in section 3a., we classified “very poor” and “poor” as a negative opinion, “satisfactory” as neutral, and “good” and “very good” as positive. 62 students completed the survey. No students were in the negative opinion classification, two students were in the neutral classification, and the remaining 60 students were in the positive classification.

4. **Sustainability Plan**

To provide sustainability with our implementation, our course materials and the newly installed WeBWorK are available for other faculty. During a department meeting this Fall, we demonstrated our materials, and invited faculty to adopt these in the Spring 2018 semester. Indeed, for Statistics, this has happened sooner than expected. Two first-time instructors used the OpenStax text with the lecture notes and WeBWorK sets created/compiled by Dr. Carden. These sections had different instructors and were not included in the previous evaluation to prevent confounding, but it shows a willingness to use open-access resources in the department.

All course materials (including notes and homework problems in WeBWorK) will be made available on our faculty web pages (Calculus on Dr. Kersey’s, and Statistics on Dr. Carden’s). Secondary hosting will be on the shared
network drive used by Georgia Southern’s math department.

5. Future Plans

Our foray into teaching with free OER course materials has been positive. We were optimistic going into the project, and are enthusiastic looking forward. There are a lot of open-source course materials available and publishing possibilities that we will utilize in our courses in the future, as we continue to develop and improve our own course materials. We are proponents of WeBWorK, and will continue to write problems and get more faculty involved. In the future we will consider developing OER for other courses, and consider about how to improve our current classes.

6. Description of Photograph

Dr. Steve Carden (left) taught Introductory Statistics and Dr. Scott Kersey (right) taught Calculus I using OER course materials during the Fall 2018 semester at Georgia Southern University.
